

Power Punch™ Multi-Impact Tool

The Power Punch Multi-Impact Tool is an electrically operated, hand held, combination wire insertion tool. It can terminate 5-pair wires simultaneously on both the cable side and the cross-connect side of 110 type termination blocks, without cutting off leads. Or, with a change of heads, it can insert and trim up to 10 wires at a time. It is also used to seat the 110C connecting block. The trigger-activated electric solenoid action eliminates the physical exertion required with other push-down insertion tools. It also ensures proper and effortless termination of tough waterproof conductors at low temperatures.

Features:

- Trigger activation enables hours of use without operator fatigue encountered with manual punch-down tools. The uniform punch force is provided by an electric solenoid action.
- Provides wire insertion, with or without cutting leads
- Easily seats the 110C connecting block.
- Extension cord locking retainer.
- Flexible head rotates in 90 degree increments.
- Safety slide locks the trigger.
- Rugged high impact housing with double insulation.
- Increases productivity of terminating cable wiring to blocks, in most applications.
- Easy head replacement.
- No lubrication required
- Inserts and cuts waterproof conductors at low temperatures.
- Safety off-on trigger lock.
- Does not require grounded extension cord.
- Does not require grounded extension cord.
- Standard 120 VAC
